350 - Health, Safety, Comfort — **Not In Compliance**

922 KAR 2:090. Section 10. Director Requirements and Responsibilities.
(1) A director shall:
(l) Assure the health, safety, and comfort of each child;

Findings:

General: Based on interview and review of documentation, the facility failed to ensure the health, safety, and comfort of a toddler in care. Review of documentation received in the DRCC office on 9/27/18 indicated that a thirteen (13) month old male toddler with a dairy allergy might have consumed whole milk from another child's sippy cup during lunch on 9/26/2018. Based on interviews, a staff person was sitting at a round table with the toddler but had turned around briefly to wipe another child's nose. When this staff person turned back around, she saw that the toddler had another child's sippy cup holding it to his mouth. The staff were not sure if the toddler consumed any of the milk at that time but informed the child-care facility's manager. The manager immediately contacted the toddler's mother who informed the manager not to administer the toddler's Epi-pen unless there was a change in his breathing. The toddler vomited and the manager notified the emergency medical technicians (EMTs). The EMTs arrived, examined the toddler, and recommended to the parents that he go see a pediatrician. The parents transported the toddler to their pediatrician's office where he vomited and started showing signs of urticaria (skin rash). A review of the patient summary report found the toddler was treated for an allergic reaction to food and had dexamethasone (steroid shot) and a dose of Diphenhydramine (Benadryl) administered. Interviews, found the toddler had just transitioned to the toddler classroom on 9/17/18. During interviews, the surveyor found the classroom staff and parent were under the impression that a high chair was supposed to be in place for the toddler due to his food allergies. It is important to note there are two (2) other toddlers with food allergies in this classroom that have high chairs designated for them. The manager stated she did not know the reason why this toddler's high chair did not move with him when he transitioned. The manager stated since this occurred, this toddler now has a high chair designated for him during meal times.
